

SUHAS PALLA

331-253-9482 | Email: spall13@illinois.edu | www.linkedin.com/in/suhas-palla

EDUCATION

University of Illinois at Urbana-Champaign

Bachelor of Science in Industrial Engineering

Expected May 2029

GPA: 4.00/4.00

Honors: James Scholar

Related Coursework:

Intro to Differential Equations, Intro to Electronics, Physics: Mechanics, Engineering Graphics & Design, Intro to Computer Science (Java)

TECHNICAL SKILLS

Programming & Computing: Java, Python, MATLAB (basic), Fusion360 (CAD)

Web & Software Development: HTML, CSS, JS, TypeScript, Next.js, Node.js, SQLite

AI & Machine Learning: ML, CNNs, LLMs, Data preprocessing and model evaluation

WORK EXPERIENCE

Code Ninjas – STEM Summer Camp Leader

May 2025 – Aug 2025

Lisle, IL

- Led coding and robotics instructions for 50+ k-9 students across multiple summer sessions
- Designed and delivered weekly lesson plans, incorporating coding, robotics, and video editing
- Provided one-on-one mentoring in debugging and problem solving during daily lab activities
- Coordinated end-of-camp showcases featuring student built projects

PROJECT EXPERIENCE

UIUC Campus Navigator – Android Campus Navigation App

March 2026 - Present

- Built a Java Android app specifically for UIUC students that integrates real-time MTD bus data with personal class schedules to recommend exact departure times, bus routes, and boarding stops for each class
- Implemented multi-API integration using Retrofit across 4 external services (MTD, Google Maps, Google Places, OpenWeatherMap) to power real time weather aware routing logic
- Designed a fully local first data architecture using SQLite and SharedPreferences with no backend required, keeping all user data stored securely on-device

Wagerly – NBA Player Performance Analysis App

Feb 2026 - Present

- Built a full-stack NBA analytics platform using Next.js, TypeScript, and Node.js as a part of a 5-person honors team
- Developed backend API routes to extract and process player statistics from large CSV data sets (300k+ records), including scoring trends and head to head performance history
- Implemented dynamic data visualization with color coded bar charts to display player performance metrics relative to statistical thresholds
- Integrated Google Gemini API to generate player insights, projected scores, performance probability percentages, and AI driven recommendations

AI & Machine Learning Research – Distracted Driving Detection

Jun 2024 – Jul 2024

- Developed and refined a machine learning model to detect distracted driving behaviors using computer vision techniques
- Improved model accuracy from 72% to 84% through data preprocessing, CNN architecture tuning, and iterative training
- Engineered Python-based pipelines for dataset preparation, model training, and performance evaluation

EXTRACURRICULAR ACTIVITIES & LEADERSHIP EXPERIENCE

ASME (American Society of Mechanical Engineers) – Design Team Member

Champaign, IL

Feb 2026 – Present

- Designing CAD housing components for pneumatic valves integrated into an intelligent mattress topper system
- Iterating on housing geometry to ensure proper valve fitment, structural integrity, and compatibility with surrounding assemblies
- Collaborating with hardware and mechanical sub teams to align housing designs with system level integration requirements
- Applying GD&T principles and design-for-manufacturability considerations to produce accurate, fabrication-ready models

ICON (International Consulting Network) – Assistant Project Manager

Champaign, IL

Sep 2025 – Present

- Researched and evaluated AI-driven solutions for logistics and transportation systems, focusing on operational efficiency and scalability
- Applied an AI productivity model-Automation, Augmentation, Speed Gain, and Error Reduction-to assess impact of proposed solutions
- Quantified potential performance improvements by modeling speed gains and error reduction in transportation workflows
- Synthesized technical findings into actionable recommendations and presented results to stakeholders
